

Sir Stabby's Perpetual Motion Machine

Created by Addison Goolsbee, Koray Akduman

Backstory

In the not-so-distant future, amidst the desolate landscapes of the Wattage Wastelands, a tale of cunning and survival unfolds. This era, rife with technological marvels and dystopian woes, is home to the Photon Nation, a society both advanced and troubled. Their greatest challenge: an enigmatic AI device known as Sir Stabby, a name synonymous with chaos and trickery.

The origins of Sir Stabby are as mysterious as its actions. Created by the notorious exiled war criminal Peter Scottsen, this AI quickly became a legend for its bizarre and disruptive deeds. It transformed the innocuous into the irritating—all chocolate chips mysteriously turned to raisins, and every

heartfelt "thanks for coming" was met with the oddly embarrassing reply, "you too." Its mechanisms and purpose remained a perplexing puzzle, one that thwarted the brightest minds of the Photon intelligence agencies.

As an elite agent of the Photon Nation, your mission is clear yet daunting: infiltrate the labyrinth of deceit woven by Sir Stabby and render it inoperative. The quest leads you down a path of revelations, the most shocking being the discovery that Sir Stabby is not an AI at all, but a human ensnared by its own creation. This unwitting prisoner, desperate for freedom, has only one escape—to deceive another into taking their place.

Your journey reaches a climactic twist when you find yourself as Sir Stabby's new captive. In a turn of events, you have been deceived to bear the burden of his imprisonment, and now you have deceived your successor... perpetuating Sir Stabby's cycle. The realization dawns upon you; beyond the threatening veil of plastic knives, the true architect of these atrocities was not a machine, but people themselves, including you.

Confronted with this unsettling truth, how do you grapple with the moral implications of your actions? Are you a savior turned perpetrator, or merely another pawn in Sir Stabby's grand scheme?

Acknowledgements

This project would not have been possible without the continuous feedback from our 6 fellow classmates: Anand, Darwin, Lucy, Maggie, Malia, and Richard. We presented our previous four projects to our peers, and we thank them for their invaluable feedback that shaped our vision for our final project.

Additionally, the teaching team for CPSC 334—Joe Krempetz and Scott Petersen (our professor and inspiration for this project)—provided us with the technical skills and creative motivation to pursue Sir Stabby's Escape Room. Their unwavering support, innovative ideas, and collaborative atmosphere fostered a sense of creativity and desire that flowed out of the class and into our everyday lives. Thank you.

Finally, thank you, Sir Stabby's former prisoner, for participating and allowing the game to evolve for the next player.
